**Was your personal data
ever used to train an AI
model?**

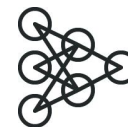

Data & AI

Every year data increase of 30%

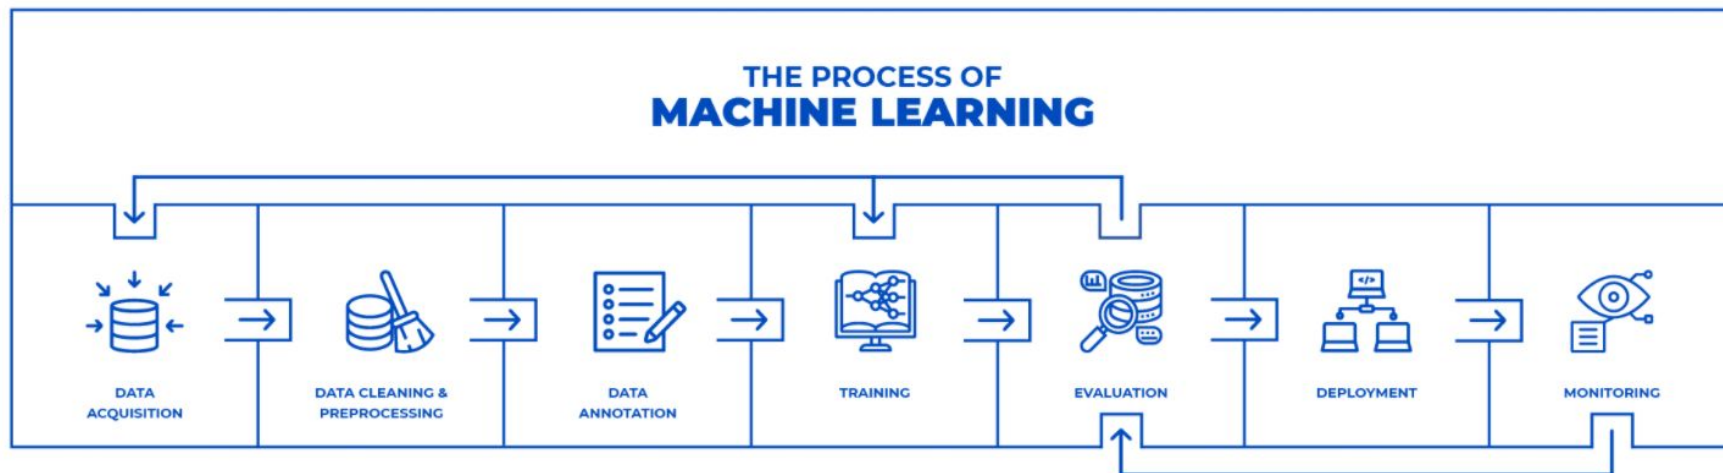

More and more AI Systems find their way into production

AI should be part of every data-driven software project

Right to be forgotten

- One cannot just pick out one data point from the model
- Research on how to forget
- Add noise so that single data points cannot be identified anymore
- Do a retraining without the data point
